Experience

2023

National Bureau of Investigation, Poblacion Sulop D/S
Information Encoder (OJT)

During my OJT at the National Bureau of Investigation in 2023, I gained hands-on experience as an Information Encoder by performing accurate data entry and record management, assisting in organizing and encoding large volumes of official documents, and maintaining confidentiality of sensitive information. This role strengthened my attention to detail, improved my typing speed and efficiency in clerical tasks, and helped me develop organizational and time management skills valuable for administrative and virtual assistant roles.

2023

Personal Work

Content Creator - Youtube

As a personal project, I managed a small YouTube channel where I created and uploaded music content by editing background visuals to match the audio and capture audience attention. This experience improved my video editing skills, creativity, and understanding of how visuals influence audience engagement on digital platforms. It also taught me how to organize media files, manage content schedules, and adapt creative strategies to improve viewer interaction. Through this project, I developed discipline and consistency in producing digital content while exploring creative ways to connect with audiences online.

2024

Academic Projects BSIT

E-commerce Project Developer

In 2024, as part of my BSIT academic projects, I developed an e-commerce application designed to support online shopping functions such as product browsing, cart management, delivery scheduling, and checkout. This project allowed me to apply technical skills in application development, database management, and user interface design while also preparing project documentation and conducting presentations. Through this experience, I enhanced my problem-solving ability, collaboration, and creativity in building practical IT solutions.
